Hydraulic system

The hydraulic system is composed of main pump, auxiliary valve, hydraulic motor, hydraulic oil tank, and oil cooler, etc.
It is equipped with a worldwide advanced pump-controlling system and a load-sensitive system. Main hydraulic elements are of famous brands both at home and abroad, which are energy-saving and highly reliable with a long service life.
Cooler: aluminum radiator with a hydraulic-driving fan.

Hoisting winch 1 and 2

A hoisting mechanism is composed of a built-in axial piston variable displacement motor, a balance valve, a reducer, a normally-closed brake and a wire rope, which can be controlled independently.
Wire rope is anti-rotation and of high quality. Primary hoisting mechanism, secondary hoisting mechanism (derricking of luffing jib) and tip boom hoisting mechanism are able to realize infinitely variable speeds from 0 to the maximum speed, largely improving the working efficiency.

Boom winch

A derricking mechanism is composed of a built-in axial piston variable displacement motor, a balance valve, a reducer, a normally-closed brake and a wire rope, which can be controlled independently. Wire rope is anti-rotation and of high quality.

	Derricking mechanism	Luffing jib derricking mechanism	Superlift derricking mechanism
Diameter of drum	2×540mm	650mm	650mm
Speed of the outmost layer	2×50m/min	120m/min	120m/min
Rope diameter	Φ 28mm	Φ 28mm	Φ 28mm
Rope length	650m	650m	860m
Rated single rope tension	14t	16t	16t

Swing

It is composed of a built-in axial piston double-variable displacement motor, a dual-gear reducer, a normally closed slewing brake, a small gear, and a slewing bearing. It realizes slewing for 360° through the slewing bearing driven by the small gear, thus realizing the slewing of superstructure.
The slewing mechanism is equipped with a controllable free swing function, which reduces the impact on the crane and ensures that braking is smooth and steady.
A closed slewing system with less impact is used to make the starting and braking more stable. The controllable free swing function make the slewing gear better fitted in operation.
Infinite slewing speed regulation: from 0 to 1.0r/min.
The slewing gear can be locked by the two mechanical locking devices in front of the slewing table, which guarantees the safety during transportation.

TECHNICAL DESCRIPTION

Crawler

The crawling mechanism is fitted with two variable displacement motors and two reducers. Each track is controlled by a lever. It is able to make such movements as crawling straight ahead/backwards, turning with a crawler, differential steering, turning on spot, crawling with a load with high maneuverability and flexibility.

The tension degree of the track can be adjusted through a jack quickly and conveniently.

Crawling speed-----0~0.9r/min

Gradeability-----20%

Operator's cab

It is an all-steel structured cab with tempered glass around. The top and front windows are laminated glasses. The cab is equipped with a right sun visor, an adjustable seat, a wiper, an electrical control lever, a load moment limiter, a digital display, a remote control box of various switches, an air conditioner, an electric fan, a head lamp, a cigarette lighter, a fire extinguisher, etc. The operator's cab has a broad vision and a capacious and comfortable inner space.

To reduce the width of the basic machine during transportation, the operator's cab can be swiveled for 90° from one side of the slewing table to the front, which is then fixed with a positioning pin. This is convenient for transportation.

Pitching-up and pitching-down is controlled by a cylinder. The operator's cab can be pitched up for 20° if the load is hoisted highly, broadening the vision of crane operator.

Load hook

All rotatable load hooks are equipped with a mousing.

400t load hook (twin hooks): 12 pulleys

200t load hook: 8 pulleys

160t load hook (twin hooks): 6 pulleys

100t load hook: 4 pulleys

50t load hook: 2 pulleys

16t load hook: cylinder hook

Operating weight

The operating weight includes the basic machine with crawlers ,main winches including wire ropes(800m and 800m) and 24m main boom ,consisting of A-frame ,160t rear counterweight, 40t carbody counterweight ,and 400t hook block
